

# CLEAN ROOM STAINLESS STEEL TROLLEY SYSTEM AND CHASSIS

## FEATURES

- Type 304 electropolished stainless steel. Retains clean attractive appearance and resists bacteria growth.
- Trolley System is fully autoclavable.
- The trolley's 18" wide wringer utilizes downward pressure design. Works with gravity for easier, faster mop wringing.
- 29-Quart Rectangular buckets are electropolished *after* fabrication for superior corrosion resistance.
- Lip around the top edge of bucket for easy lifting.
- #2610 Stainless Steel Chassis is autoclavable.

**Geerpres' Stainless Steel Trolley's** are designed specifically for clean room applications.

Made from type 304 electro-polished stainless steel.

Fully autoclavable – meeting the strictest requirements – Class 100.

Includes Trolley With 18" Stainless Steel Wringer and your choice 2 or 3 rectangular 29-quart buckets.

**18" Wide Stainless Steel Wringer** utilizes a downward pressure design which wrings the mop up to three times faster than other wringers. Wringers are electropolished for a smooth surface; therefore, bacterial and foreign particles have nothing to attach themselves to.

**Stainless Steel Rectangular Buckets** are deep drawn and seamless so there are no cracks, crevice or holes to harbor bacteria and dirt.

A lip around the top edge of the bucket allows for easy lifting.

**Multi-Bucket Trolley.** Lightweight and easy to maneuver. Can be used with two or three 29-quart stainless steel rectangular buckets. The extendable frame with 3" casters pulls out on the front of the trolley to accommodate a third bucket. The handle is removable for autoclaving and storage.

**Stainless Steel Chassis** – Heavy duty stainless steel chassis with 3" casters.
